

I claim

1. A modularized battery case comprising a stage with a battery tank for accommodating at least one battery, the stage having two opposite sidewalls each installed a clamping member and two opposite lateral sides each installed a wing portion thereon, the clamping member and the wing portion each formed at least one through hole through which corresponding fixing members pass; at least one through hole on the wing portion is corresponding to a mounting position of the stage.

2. The modularized battery case as in claim 1, wherein the tank has two electrode plates arranged on the opposite sidewalls.

3. The modularized battery case as in claim 1, wherein the wing portion has an indent on one side of the through hole thereof.

4. The modularized battery case as in claim 1, wherein the wing portion has a projecting ring on another side of the through hole thereof.
